Project Des	scription	"EmotionSync" is an intelligent emotion management platform designed to enhance users' mental well-being through technological means. The project integrates various innovative features to assist users in regulating their emotions in daily life. The highlight of the project is a meticulously crafted digital human module—an empathetic AI virtual companion capable of providing emotional companionship and personalized support through natural interaction. Additionally, the platform will explore emotion-related auxiliary functionalities, with an overall design focused on scalability and user experience, reflecting principles of software engineering management and economic feasibility				

Project Background	a focal superfice emotions solution users' digital function connection needs. Consection mental homes and seek to mental homes.	In today's society, emotion management has become a focal point, yet existing tools often remain superficial, lacking deep personalization and emotional resonance. Our team aims to create a solution with "EmotionSync" that better aligns with users' needs. The project's standout feature is its digital human technology, which goes beyond a mere functional module to serve as a bridge for emotional connection, intelligently responding to users' needs. Combined with other supportive features, we seek to explore the integration of technology and mental health while considering the platform's commercial potential, such as achieving economic
